

## **Are *Your* Fire Extinguishers code complaint?**

### **We offer a Fire Extinguisher Eco-System Analysis**

As part of our mission to improve the fire extinguisher eco-system to save lives and protect property, have worked with customers to collect data on critical issues that our customers have discovered on maintaining UL certification, manufactures warranties, controlling costs and protecting assets.

#### **Here's how it works:**

1. The Fire Extinguisher eco-system analysis is a deep dive, onsite review of your company's fire extinguishers.
  - a. Inventory current extinguishers in service, by brand, type, age, service history
  - b. Analyze actual costs of service
  - c. Test a sample size of extinguishers that have had six-year tear down or hydro testing done to confirm they have not mixed OEM agent powders and voided their UL certification
  
2. Our team will join with members of your Fire Safety team to perform the analysis
  - a. Your team members will help with logistics, oversee data collection, powder sampling and billing statements for all fire extinguisher costs
  - b. Rusoh team will capture and assemble all the data; collect the chemical agent powder samples and send those to Dyne for analysis : <https://www.dyneusa.com/>
  - c. Dyne Fire protection labs performs the powder testing and summarize their findings
  - d. Our team will complete a summary of all findings and share with your company
  
3. All data is kept confidential as we are looking to build a national database to use to help bring improvements to the greater Fire Extinguisher eco-system to save lives and protect property.
